SAP RAP

OData NetWeaver Gateway

SAP UI5

SAP Fiori

Javascript

HTML5

CSS3

UI Designing

## PROJECTS

### IT System News Calendar

- An application which informs users about downtimes and events of systems which comes from OData services .
- This UI5 application looks like a calendar indicating users by color codes likes Red, Yellow and Green shows Unplanned Downtime, Planned Downtime and Available.
- This involves user preferences and email notifications that would trigger if any system that the user is subscribed to has undergone any event.

### IT System Event Scheduling Application

- Application is designed to create events (planned downtime, incident, system and general events, system groups) for all the systems listed in SAP where System Owners can create any event on that system to let users know that it will be undergoing downtime in some particular period of time.
- It receives information from multiple OData services which gives all information about SAP systems and protected by authorizations which is only given to users on request by evaluating their role.
- Automatic creation of Maintenance Window in SAP Inhouse System Manager for planned downtimes of systems.

### Delivery Events

- Part of IT System Event Scheduling Application which includes creation , updation and deletion of delivery events i.e. release delivery, flexible delivery, master data delivery.
- Created and updated events will be visible in IT System News Calendar Application and trigger email notifications to users who will be subscribed to delivery events.

## ACHIEVEMENTS

Received 'On The Spot Award' for the invigilation during internal certification in TATA Consultancy Services.

OnSite (Client side) visit in Germany for the projects related discussions.

Received multiple 'Dot of fame' rewards in Deloitte.

## CERTIFICATES

## PROJECTS

### OCC Dashboard

- Application indicates availability percentage of SAP systems.
- Application consumes OData service which provides calculated availability percentage of SAP systems monthly, yearly and on QEC periods.

### Authorization Request Management (ARM)

- Application helps users to create authorizations for multiple available SAP systems.
- It helps users to display current authorizations and also to extend authorizations.

### Multi-Access Approver

- This application is used by approvers to check and provide raised access to the users.
- Approvers can approve/reject the raised authorizations with detailed reason.
