Bachelor Degree

Projects

Intranet Portal

In this project, I have developed custom components such as the Home page, Glossary page, and About Us page. Additionally, I created a list library, integrated the list with an SQL database, and implemented features for backup and restore.

Environment: SharePoint Server2019

Role: SharePoint developer

Responsibility: Analyzing the technical and functional aspects of the application Create SharePoint Lists. created SharePoint Content editor web part form Implemented flow Migrated (on prime to online) list and site templates.

Content Management System

I completed a Change Management project by developing a system that integrates with a SharePoint document library to display files on the UI. Additionally, I implemented features for managing announcements, news, events, and team members, improving user interaction and information accessibility.

Environment: SharePoint Online And Power Automat, JavaScript

Role: SharePoint Developer

Responsibility:

Integrated SharePoint document library with the UI to manage and display files, announcements, news, events, and team members, streamlining the Change Management process.

Leading the banking Industry

I developed a comprehensive Change Management System tailored for the banking sector. This project included creating a custom Change Management form and designing an approval process flow to streamline change requests. The system was integrated with SharePoint to ensure easy access and management of change requests. The project involved close collaboration with stakeholders to ensure all requirements were met, and it included features for tracking, approving, and documenting changes efficiently.

Environment: SharePoint Online And Power Automat, JavaScript

Role: SharePoint Developer

Responsibility:

Integrated SharePoint document library with the UI to manage and display files, announcements, news, events, and team members, streamlining the Change Management process

Manufacturing Industry

The SharePoint-based Linked Community platform offers key features for collaboration and support: Posts for sharing updates and engaging in discussions, Announcements to keep members informed of important events, a Learning Management System (LMS) for delivering and tracking educational content, SPOC for targeted expert connnect, and a Helpdesk for submitting queries and receiving assistance. These features ensure effective communication, learning, and support within the community.

Environment: SharePoint Online

Role: SharePoint Developer

Responsibility:

- Platform Development:** Designed and developed the Linked Community platform on SharePoint, focusing on user-friendly collaboration and information sharing.
- Feature Integration:** Implemented features like Posts, Announcements, LMS, SPOC, and Helpdesk to enhance community engagement and support.
- Content Management:** Managed and organized educational content within the LMS for effective delivery and tracking.
- User Engagement:** Supported user interaction through posts and provided assistance via the Helpdesk.
- Quality Assurance:** Ensured all features functioned correctly through rigorous testing and ongoing updates.

Project Management App

Developed a Project Management App using Power Apps to streamline project tracking, task assignments, and team collaboration. The app features task creation, progress tracking, deadline reminders, and automated notifications to enhance project efficiency and accountability.

Environment: Power Apps, Power Automate, SharePoint Online

Role:

Power App Developer

Responsibilities:

- Designed and developed the app, implemented task management features, integrated Power Automate for workflow automation, and collaborated with stakeholders to ensure the app met business requirements.
