EXPERIENCE

IT Analyst

Tata consultancy Services

March 2018 – Ongoing

Gurgaon

- Working on a centralized database Application which is linked to internal and external Web for storing information that is used by various other Applications/Business Users. Technology used: pl/sql, Unix, java, Spring.
- Working on sqldeveloper to maintain database with incoming membership data and vi editor, batch jobs, programs to handle, load huge files. queries/procedures to extract relevant data in stipulated timeframe. (pl/sql, shell script, vi editor)
- Working on Webservice/Webapp Application, added new functionality in Webapp for generating additional reports to ease business analysis and added another self service to omit technical team involvement on each request (to reduce turnaround time) technology used- java, Spring.
- Voluntarily took initiative to create jobs to automate manual steps, created a single batch job to handle them collectively that increased accuracy too. (proC)
- created shell script to generate and deliver reports via sftp as per Business requirement. (Shell script).
- Simultaneously worked on another Database centric Application.
- Handle all documentation and customer calls.
