PROFESSIONAL EXPERIENCE

Sr Python developer (Lead) - Xafs Analysis

With the help of this project we allow material testing of any product.

My responsibility including using larch read and calculate data of different files like .nor, .chi, .txt etc.

As a lead of this project, I worked on managing both frontend and backend. Using MsSQL database Insert fetch update data.

Tech Stack - Python, Flask, Larch, MsSql

Sr Python developer - Imoto

It's a ev based fleet management system, where admin can manage there vehicle's track vehicle location from the dashboard set alerts create report etc.

My responsibility including, Create APIs for filter vehicle data and convert data in json format using serializer for send mobile/ios app.

Using Postgres database insert fetch update data and create tables in models file.

Python Developer - Ticketing Solution

This is a ticket management system which deals majorly with the live events of both seating and standing.

This system allows users to manage their events according to their needs without worrying about ticket management, report management etc. This whole project was working on branching workflow and was using gitlab.

Jr Python Developer - Web Scrapper

Scrap the data of websites like indeed, naukri, yellow pages, Monster etc. My responsibility includin, Automated the web browser to the specified link address with selenium. Scrapped the different WebPages and extracted the url. Converted the extracted data into structural form. Transferred the data into mongoDB database.
