**Documentation/Bug Tools:** Atlassian tools such as Bamboo and Confluence, JIRA

**Database:** Oracle, SQL, IBM DB2, PostgreSQL

### Projects

---

**Associate Team Lead @Intellect Design Arena Ltd. (From Dec 2015 till date) Consultant @Mumbai, India (Onsite at Canada for 1+ year):**

#### 1) Project : Lending Transaction Summary (LTS) Lite – BMO (Bank)

Lending Transaction Summary (LTS) Lite application stores all relevant data pertaining to loans given by Bank of Montreal (BMO) Harris to its customers. It also interfaces between various external systems that hold various data required for loan processing through the course of loan application to final loan settlement. It acts as a central repository for all the loan related deals originated in the bank.

**Team Lead:** LTSL - Lending Transaction Summary Lite

#### Responsibilities:

- Was part of core development team to build LTS-Lite product
- Conduct UAT of the application and provide support for it
- Development and support to deploy the application on production environment
- Worked on new release and implementing the changes
- Provide one-year production dev & support at on-site in BMO bank – Toronto (Canada)
- Analyzing production issues, provide solution of application issue and implementing the fixes
- Lead onsite and offshore development teams, Technical code quality review of the code developed by the team and review of functional scenarios

**Technologies:** Core java, Spring boot, Angular framework, PostgreSQL

## 2) **Project:** CBX - Corporate banking exchange –CIBC (Bank - Canada)

CBX has broken down transaction banking into set of more than three hundreds apps. Each of which deliver a specific banking functions. Solution allows segmentation, creation of roles, personalize things, targeted campaigns and branding and so on. Through CBX, bank can offer their corporate client a uniform channel experience across diverse touch point such as internet, tablets, mobile phone and so on without any additional coding. Application has two components, back-office and front office. Back-office - is essential application that is installed at implementing bank and it is used by bank user to administer the CBX functionality. Essential functions such as creation of administrative users, grant of access right, monitoring and control functions, workflow and rules etc. are found in the Back-office application. On the other hand, front application is used by corporate users that is by the customer of implementing bank. It allows corporate users to initiate and authorize the business transactions (Such as send money, receive money, send rtp, receive rtp transactions), Perform queries, generate reports, and monitor the status of their business banking activity with the bank. The back-office setup is required to be front office work.

**Senior Team Lead:** CBX – Corporate banking exchange for CIBC bank

### **Responsibilities:**

- Worked on Interac-Interface layer (IIL) module in CBX application
- IIL module receives the payment request from UI and sends it to Interac (Payment hub of Canada), then receives the response from Interac processes it and sends that response back to UI
- Development and support to deploy the application on production environment
- Worked on new release and implementing the changes
- Analyzing production issues, provide solution of application issue and implementing the fixes
- Lead offshore development teams, Technical code quality review of the code developed by the team and review of functional scenarios

**Technologies:** Core java, spring boot, Angular framework, PostgreSQL, Kafka mq

## **PROFESSIONAL SUMMARY**

---

### **Dec 2022 – Till Date :**

- Firm : Worldline Global Services Pvt Ltd, Pune
- Post : Individual contributor
- Experience: Recently joined

### **Dec 2015 – Nov 2022 :**

- Firm : Intellect Design Arena Ltd, Pune
- Post : Senior Project Lead
- Experience: 7 Years

## **Education**

---

**Master's in Computer Science:** Degree Awarded **May 2009**

Institute: HAL College, Gokhale Education Society Nasik, Pune (MS India)
