SKILLS

- **Languages**: Core Java, Java 8, SQL
- **Technologies**: J2SE, J2EE, JDBC, REST Web Service
- **Frameworks**: Spring (Spring core, Spring Boot, Spring Data JPA, JDBC), Microservices
- **Unit Testing**: Junit, Mockito
- **ORM Tool**: Hibernate
- **Database**: MySQL
- **Webserver**: Tomcat
- **Development Tool**: Intellij IDEA
- **Version Control**: Git, Bitbucket
- **Rest API Testing Tool**: POSTMAN
- **Project Management Tool**: Jira
- **Build Tool**: Maven
- **Methodologies**: Agile

OBJECTIVE

Seeking a Quality Assurance position to leverage my skills in a collaborative team environment, stay current with IT advancements, and uphold excellence in evolving industry standards.

EXPERIENCE SUMMARY

- With 4+ years of experience in developing robust **Java/J2EE** applications using **Spring Core, Spring Boot**, and **Spring Cloud** and **Microservices**.
- Implemented **RESTful web services** for efficient client-server communication.
- Utilized **Spring Beans** for modular business logic and seamless persistence layer integration.
- Applied design patterns like **Singleton** for improved code structure and scalability.
- Proficient in core Java including **Collections API, Java 8**, **Stream API, SOLID principles** and **OOPs**.
- Extensively utilized java 8 concepts like **Lambda Expression** and **Functional Interfaces** and proficient in **exception handling**.
- Familiar with **Spring Security** and **Spring Data JPA** for enhanced application security and database interactions.
- Collaborated in **Agile methodologies** using **Jira** and **Git** for version control and collaborated effectively with team members using **IntelliJ IDE** and integration of third- party APIs.
- Conducted unit testing using **JUnit** and **Mockito**, ensuring high-quality, reliable, and performant code.
- Knowledge of **Junit, mockito**, **Swagger** and **POSTMAN.**
- Efficient in Database design and manage in **MySQL.**
- Proficient in ensuring high-quality code through code reviews and continuous integration.

Software Engineer
TechMatrics Solution • Aug 2020 – Till now

Client Name : Wehkamp

Description : Wehkamp is a well-known Dutch e-commerce company based in the Netherlands. Founded in 1952, it started as a mail-order company and has since evolved into one of the major online E commerce retailers in the country. Wehkamp offers multi category products including clothing, electronics, home goods, health and beauty and more.

Roles and responsibilities :

- Implemented and integrated microservices to enhance system scalability and flexibility.
- Developed efficient and robust code solutions using Spring Boot, JPA, and REST API.
- Conducted comprehensive unit testing to maintain code quality.
- Proficient in API testing using Postman to ensure functionality and reliability.
- Contributed to codebase management by raising PR in GitHub for seamless collaboration and version control.
- Engaged in agile methodology framework, participating in estimation, planning, design, and development   phases.
- Actively participated in daily stand-up meetings(Scrum) and requirement review sessions,   providing technical insights and collaborating with the team to analyze requirements.
- Demonstrated proficiency in troubleshooting complex issues to ensure smooth system operation and minimal downtime.
- Maintained up-to-date documentation for codebase, APIs, and system architecture to facilitate knowledge transfer and ensure transparency within the team.

Client Name : UPS Supply Chain Solutions

Description : UPS Supply Chain Solutions is a division of UPS (United Parcel Service) that focuses on providing comprehensive logistics and supply chain management services . This division aims to help businesses optimize their supply chains, improve efficiency, and reduce costs globally.

Roles and responsibilities :

- Played a role in gathering project requirements, analysing design needs and handling development.
- Developed and maintained java applications using java 8, Spring Boot, Hibernate, and Spring data JPA
- Implemented the code using Spring Core, Spring ORM.
- Used Entity, Controller, Service , Repository Layers to handle and fetched data from DB.
- Delivered the code raising PR in GitHub.

Client Name : John Lewis
Description : John Lewis is a major British retail company operating department stores and an online platform. Known for its high-quality products and customer service offering wide range of goods including clothing, electronics, etc. The company emphasizes on aggressive pricing, department stores, online retail, service, partnership and ethical practices.

Roles and responsibilities :

- Implemented core java concepts like Object Oriented Programming concepts, collection framework, multithreading.
- Involved with Spring MVC and connect with MySQL DB.
- Mostly involved in Core java concepts.
- Ensuring seamless communication between different services using springboot.
- Delivered the code raising PR in GitHub.
